

NGT Collaboration Services

Enhanced for More Productivity, Reach for Virtual Meetings, Trainings

New Features Include:

Effortlessly record, edit, label and publish rich media podcasts to subscribers via RSS feeds

- ▶ With the latest release of **NGT's Conferencing Services** you now have the ability to edit recordings and publish rich media podcasts, making broad dissemination of recorded meetings and trainings fast and easy to corporations' mobile and geographically dispersed workforce, customers and partners.
- ▶ We've also included an easy-to-use podcasting tool to record, edit, label and publish rich media podcasts. With our latest release of **NGT's Conferencing Services**, we now make it possible for you to effortlessly turn audio and web conference recordings into rich media, such as audio podcasts with visuals, and distribute them to subscribers via iTunes-compatible RSS feeds for playback on MP3 players, desktop computer, television or set-top videoconferencing system.
- ▶ The new podcast feature facilitates regular and direct communication with subscribers by bypassing third-party news media filters. It's perfect for publishing recordings of department meetings, trainings, sales presentations and project work among others. Podcasts also enable enterprises to take full advantage of employees' commuting time to follow company developments and maximize their time. The audience can tune in on their timetable for a refresher or listen for the first time to these podcasts on their portable media players on airplanes, trains or in automobiles, maximizing their time and productivity.

Make single or multiple cuts to recordings

- ▶ Additional capabilities include the ability to make single or multiple cuts to recordings, as well as synching recordings up to a podcast feed.

Initiate and manage meetings, invitations, recordings, reports from new conference center

- ▶ Another way we continue to make it even easier to web conference is the new conference center. A meeting organizer or trainer can initiate and manage meetings. They can create and send invitations that automatically populate the chairperson and participants' calendars (compatible with most calendaring systems including Outlook® or Lotus Notes®). They can also customize up to five participate registration fields to collect contact details and information about the audience; as well as view and download Web and recording reports from the conference center. We also include data encryption for recording and PowerPoint® files stored on the server.

Unlimited playbacks for podcasts and recordings

- ▶ Playbacks for hosted recordings and podcasts are unlimited and free!!

iTunes is a trademark of Apple Computer, Inc. registered in the US and other countries.
